EDUCATION

Carleton University

September 2022 - April 2027

- Bachelor of Engineering, Software Engineering - Co-op, Final Year
- Scholarship:** Award of Excellence for International Students, Entrance Scholarship, Henry Ford Scholarship (**\$15,000**)
- Coursework:** Machine Learning, Operating Systems, Algorithms, Object-Oriented Programming, Design Patterns

PROFESSIONAL EXPERIENCE

Software Developer, Co-op

September 2025 – December 2025

Magnet Forensics

Ottawa, ON

- Contributed to the **Magnet One** SaaS platform, developing and maintaining features that support ingestion, storage, and management of large digital evidence files for law-enforcement and enterprise investigations.
- Implemented role-based access control for **M1 Hub Storage**, validating user access via authentication tokens and permissions, and building a fail-safe UI logic using **React** and **TypeScript**, to handle network delays and invalid tokens.
- Extended the **Desktop Storage Uploader** by adding a user log download feature, implementing **C#/.NET** logic to collect, compress, and export application logs as JSON for end-users.
- Wrote tests to mock and verify functionality for M1 Hub Storage using **Vitest** and **MSW**, and **.NET** testing framework for the Desktop Storage Uploader to ensure reliability across edge cases.

Software Engineering Intern, Co-op

April 2025 – August 2025

Keel Minds

Toronto, ON

- Built **Flutter** UI components, responsive layouts, and modular widgets, on the company's mental health SaaS application hosting **111,000+** patients, supporting rollout of new **Figma** designs on production branches.
- Contributed to backend routes in **Node.js** and wrote **SQL** queries to manage records of care provider/client sessions.
- Used **git** workflows for team collaboration and **GitHub Actions** for automating build, test, and deployment pipelines.
- Participated in bi-weekly Q&A standups to assess internal and external product reviews and contribute to **sprint planning**.
- Received mentorship and practice on modern *software architecture, design patterns, system design and HTTP*.

Software Developer Intern

February 2025 – April 2025

Wouessi Digital

Toronto, ON

- Contributed to the company portal using **TypeScript**, **React**, and **Vue.js**, integrating **Supabase** for authentication and **PostgreSQL** for data storage.
- Assisted in prototyping a content recommendation system using **TensorFlow** and **Spark**, for user personalization strategies.
- Helped build a Tender Discovery platform using **MongoDB** and **AWS S3/Lambda**, simplifying tender application workflows.
- Collaborated on an internal Employee Management System with **git** access control and **CI/CD** setup using **Docker**.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C#, C/C++, Dart, TypeScript, HTML/CSS, SQL

Framework: React.js, Flutter, TensorFlow, PyTorch, .NET, Node.js, Express.js, Flask, MongoDB

Tools: Git, Docker, Linux/Unix, CI/CD Pipelines, AWS (S3, ECS2, Lambda), Supabase

Others: LLM, Relational Database, Jira, Agile - Scrum, Unit Testing, Functional Programming

STARTUP EXPERIENCE

Founder, Lead Software Developer [App Store](#) [Google Play](#)

November 2024 – Present

Gropad Ping+

Ottawa, ON

- Built a cross-platform mobile app for matching people in schools and cities based on needs, wants and desires, using natural language with context intelligence; used **Flutter** and **Supabase** for frontend, database, authentication and media storage.
- Featured listing of goods, businesses, events, in-app messaging, and 2 serverless algorithms for background matching.
- Used Firebase Cloud Messaging (**FCM**) tokens, deployed **TypeScript** serverless functions, Stripe **APIs**, and other modern frameworks, to support deep linking, push notifications, two-step verification, and payment processing.
- Adopted standard SWE practices for iterative and collaborative builds using **git**, **MVVM** design pattern, and database security with sanitized API and webhook invocations.

PROJECTS & HACKATHONS

Gemini Groceries & Recipe Spurs Hack 2025 Hackathon AWS, MERN stack Open-source - GitHub	June 2025
- Developed a full-stack grocery and recipe assistant using React.js, Node.js, Express.js, and MongoDB Atlas, enabling users to create smart shopping lists with AI for meal suggestions and nutrition tracking. - Integrated Google's Gemini AI for image processing, to extract grocery items from shopping list photos and generate meal recommendations with nutritional facts and SerpAPI for product search and price matching between different grocery stores. - Implemented secure user authentication with JWT tokens, RESTful API design, and responsive UI using Tailwind CSS with interactive 3D components using Three.js. - Deployed on AWS Amplify with CI/CD pipeline using custom amplify.yml configuration.	
Patheon AI Physics Research Lab Invest Ottawa 2025 Hackathon	July 2025
- Built full-stack AI Physics research platform using Next.js, TypeScript, ElevenLabs and Google Gemini 2.0 Flash API, generating hypothesis-based analysis with citations, theories and experimental suggestions. - Implemented voice interaction with ElevenLabs integration, featuring voice cloning, speech-to-text transcription, and synchronized audio visualization for ease of accessibility. - Designed 3D space-themed UI with liquid glass effects, custom cursor animations, and responsive architecture using Tailwind CSS and Framer Motion.	
ASL Translation Software <i>Python, OpenCV, TensorFlow, Keras</i> cuHacking Hackathon GitHub	November 2024
- Built and trained a Convolutional Neural Network (CNN) for Computer Vision with TensorFlow, Keras API, and OpenCV to translate American Sign Language (ASL) characters, achieving 90.5% accuracy during translation. - Deployed model on a Python desktop app for demo during the cuHacking 2024 Hackathon, presenting how our software bridges communication gaps between deaf or non-verbal signers and non-signers.	
Ride Along Student Ridesharing App cuHacking 2025 Hackathon Open-source - GitHub MVP Demo ②	March 2025
- Led development of a cross-platform ridesharing mobile & web app for university students using Flutter and Supabase, enabling carpooling with peers and cutting 45% commute costs spent on other platforms. - Implemented in-app messaging and rendered live maps with driver and passenger location, using Flutter's native geolocator dependency, ensuring stability across device platforms. - Designed Figma pitch deck and placed 2nd at cuHacking 2025 for community impact; deployed on AWS Amplify with CI/CD.	

ACTIVITIES & OTHER EXPERIENCE

Outreach Programmer, Co-op <i>Faculty of Engineering and Design, Carleton University</i>	January 2025 – April 2025 Ottawa, ON
- Led STEM workshops and camps for youth, promoting engineering and technology through hands-on activities in programming, design, and construction. - Created tools including games, 3D simulations, and robotics software using TinkerCAD, SPIKE, and related platforms.	
Mathematics Instructor <i>Mathnasium Learning Centre</i>	September 2024 – April 2025 Ottawa, ON
- Delivered 1-on-1 math tutoring to grades K–12 students, assessing progress through quizzes and tests to provide feedback. - Maintained strong communication with students and parents, supporting partnership to students' growth and confidence.
